Start here

A compact packet, fuller practice, and room to explain the math.

Open these three things

Daily_Packets has one PDF for each day: three pages on Saturday and Sunday, one page on weekdays. The combined student book contains the same packets. Open the PowerPoint and the matching weekly teacher guide for weekend lessons.

The daily target

Most days have 20 questions; Wednesday has 25. Two of those questions are multi-step challenges, C1 and C2. Routine questions build fluency and understanding. The challenges ask the student to connect ideas, plan a method and explain the result.

Print less

Print one three-page packet on each weekend day and one page on each weekday. Use either the individual packet or those pages in the combined book. Write on the packet or separate paper. Worked examples and assessment alternatives are inside the weekend packets.

Allow enough time

Plan for 30-45 minutes on ordinary weekdays and 40-55 minutes on Wednesday. Two shorter sittings are fine. Weekend lessons are planned for about 80 minutes, with up to 10 extra minutes for discussion. On a busy weekend, split the lesson into two sittings.

During a lesson

Follow the topic and Day/page/item labels on the slide. Pause before each reveal. Let the student attempt the problem, explain a model, compare methods, and then work on the challenges. A summary and independent exit ticket close the lesson.

Check the thinking

Use the key after an attempt. Ask “How did you decide?” and “Where does your method first differ?” Accept a different correct method. If the same idea causes repeated errors, revisit its model and try a fresh example later.

The Friday check

Use the 18 routine questions independently, followed by the two challenges. Record routine accuracy separately from challenge reasoning. Each challenge needs a plan, correct mathematics and an explanation; a correct number alone is incomplete.

Review together

Each week has an answer-review section in the PowerPoint. Use it after the corresponding work is finished. The teacher guide includes all answers and fuller worked solutions for the challenge questions.

Calendar | Nov 2026-Jan 2027

Days run Saturday through Friday. Shift the dates together if you begin later.

Week 01 | Days 001-007

Fractions and equal parts

Lessons: Nov 07 and Nov 08 | Daily practice: Nov 09 to Nov 13

Week 02 | Days 008-014

Ratios and matching amounts

Lessons: Nov 14 and Nov 15 | Daily practice: Nov 16 to Nov 20

Week 03 | Days 015-021

Rates and percents

Lessons: Nov 21 and Nov 22 | Daily practice: Nov 23 to Nov 27

Week 04 | Days 022-028

Dividing fractions

Lessons: Nov 28 and Nov 29 | Daily practice: Nov 30 to Dec 04

Week 05 | Days 029-035

Decimals and long division

Lessons: Dec 05 and Dec 06 | Daily practice: Dec 07 to Dec 11

Week 06 | Days 036-042

Expressions and equations

Lessons: Dec 12 and Dec 13 | Daily practice: Dec 14 to Dec 18

Week 07 | Days 043-049

Area and surface area

Lessons: Dec 19 and Dec 20 | Daily practice: Dec 21 to Dec 25

Week 08 | Days 050-056

Negative numbers, coordinates, and inequalities

Lessons: Dec 26 and Dec 27 | Daily practice: Dec 28 to Jan 01

Week 09 | Days 057-063

Data, center, and spread

Lessons: Jan 02 and Jan 03 | Daily practice: Jan 04 to Jan 08

Week 10 | Days 064-070

Scale, proportions, circles, and review

Lessons: Jan 09 and Jan 10 | Daily practice: Jan 11 to Jan 15

Holiday weeks: split a longer day into two sittings or shift its date. Keep the sequence so each new lesson builds on the earlier work.

Skills tracker

Write a date or short note. Recheck with a fresh example at least one week later.
