# Data displays and center

## Explore and build the idea

20 daily questions include C1 and C2. Use separate paper when helpful.

---

Lesson focus: Read data displays and use mean or median to describe a typical value.

R1. Use y = 2x for x = 1, 3, 5. Give the ordered pairs.

R2. Find the surface area of a closed 2 by 4 by 6 cm box.

R3. Find the distance from (-2, -3) to (-2, 2).

R4. Solve x + 11 = 18.

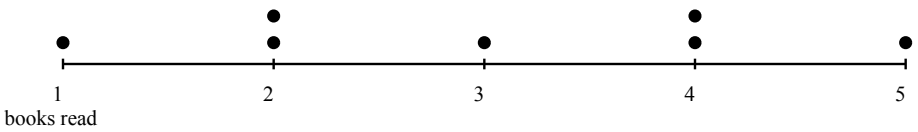

P1. Which asks a statistical question: “How many pages are in this book? ” or “How many pages are in each library book on this shelf? ” Explain.

P2. Build a dot plot for 1, 2, 2, 3, 4, 4, 5 books read. Describe its shape and total number of dots.

P3. Build a histogram for 0, 1, 1, 2, 2, 3, 4, 5. Use bins 0 to under 2, 2 to under 4, and 4 to under 6.

P4. Four jars hold 2, 4, 5, and 9 counters. Share all counters equally. Find the mean and show how it balances the deviations.

## Lesson model

# Data displays and center

## Practice and compare methods

20 daily questions include C1 and C2. Use separate paper when helpful.

P5. Find each median: (a) 8, 2, 4, 4, 7; (b) 5, 2, 9, 3, 6, 5. Order first.

P6. Data are 2, 3, 4, 4, 7. Replace 7 with 27. Compare the old and new mean and median. Which center changes less?

P7. Four game scores have mean 6. Three scores are 3, 5, and 7. Find the missing score.

F. Ordered data are 1, 3, 6, 8. Complete: median = (3 + __) ÷ 2 = __.

D. Luis finds the median of 9, 2, 6, 3 by averaging 2 and 6. He gets 4. What should he change?

X1. Choose the statistical question: (A) How many pages are in one named book? (B) How many pages are in each of 8 books? Explain.

X2. Make a dot plot for 1, 1, 2, 3, 3, 3, 5. State the total dots and most frequent value.

X3. Find histogram frequencies for 0, 1, 2, 2, 3, 4, 5, 5 using bins 0 to under 2, 2 to under 4, and 4 to under 6.

## Worked example - compare with the slide model

Find the mean of 3, 4, 5, and 8.

The total is 3 + 4 + 5 + 8 = 20.

There are four values, so share 20 among four groups.

Mean = 20 ÷ 4 = 5. The deviations −2, −1, 0, 3 balance to zero.

**Result: 5**

# Data displays and center

## Challenge, explain and check

20 daily questions include C1 and C2. Use separate paper when helpful.

C1. Seven reading times are 8, 9, 10, 10, 11, 12, and 24 minutes. Find the mean and median. Replace 24 with 10 and recompute. Which center changes more, and which original center better describes most of the times? Support your choice.

C2. Five quiz scores have mean 14. Four scores are 10, 12, 16, and 18. Find the missing score and median. Then explain whether adding a sixth score of 14 changes the mean or the median.

## Finish the lesson

S. The mean tells __. The median tells __.

E. Data are 8, 2, 11, 5, 6, 4. Find the median and the mean. Show your ordered list.
