# Start here

## Three things to open

Student_Day_by_Day.pdf is the entire student workbook. DoubleAdvanced_Weekend_Slides.pptx is the lesson deck. Teacher_Weeks contains one complete guide for each week.

## For the student

Find the day in the workbook index on page 2. Print that day only, or use the bookmarked PDF. Days run Saturday, Sunday, then Monday through Friday. Each week starts a new seven-day block.

## For the tutor

Open this week's teacher guide. It gives the lesson slide order, exact workbook pages, what to say and ask, signs of understanding, and what to do when the student is stuck. Complete answer keys are in the same guide.

## On the slides

Every teaching slide names the topic. Follow-along references give Day, student page, and item label. R is recall, P is a lesson problem, F is your turn, D is discussion, M is mixed review, S is the student summary, and E is the exit ticket. Watch-and-discuss slides do not require writing.

## Weekly answer review

Each week has a separate answer-review section in the PowerPoint, including a weekly opening slide and day-by-day answers. Use it after Friday, or after the corresponding work has been attempted. It is not extra weekend lesson time.

## Built-in Booster practice

Selected Booster questions now replace part of the daily practice. There is no extra Booster packet to find. Wednesday keeps one reasoning puzzle. Keep weekday work to 15-20 minutes; use 15-minute blocks during holiday weeks.

## Pages that follow

The parent guide, calendar and skills tracker are collected here. The final page is optional half-inch grid paper. Other paper tools appear beside the student days that use them.
