Ratio tables and comparisons

Explore and build the idea

20 daily questions include C1 and C2. Use separate paper when helpful.

Lesson focus: I can use tables, double number lines, and equal totals to solve ratio problems.

R1. A number line uses quarters from 0 to 2. Where does $\frac{7}{4}$ belong?

R2. Find $\frac{3}{4} - \frac{1}{3}$.

R3. Is $\frac{2}{3} \times 9$ smaller or larger than 9? Compute to check.

R4. Find $3 \times \frac{2}{3}$.

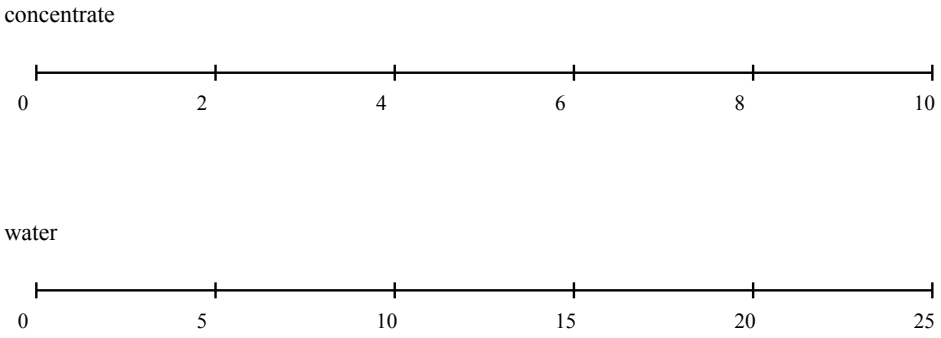

P1. Concentrate : water is 2 : 5. Complete pairs (2, 5), (4, __), and (6, 15).

P2. For that 2 : 5 mixture, how much water matches 10 cups concentrate? Solve using a table and a double number line.

P3. Mix A uses 3 cups syrup to 4 cups water. Mix B uses 5 cups syrup to 8 cups water. Which has more syrup for the same water?

P4. Yellow : blue paint is 2 : 3. There are 35 cups in all. How much of each color?

Lesson model

Ratio tables and comparisons

Practice and compare methods

20 daily questions include C1 and C2. Use separate paper when helpful.

P5. Plot (1, 3), (2, 6), and (3, 9). Let x be bags and y be marbles. Does their straight line also pass through (0, 0)?

F. Green : white is 4 : 1. There are 30 beads. Five equal parts means __ beads per part. Green = __; white = __.

D. Leo says 2 yellow : 3 blue means $\frac{2}{3}$ of all the paint is yellow. Repair his statement.

M1. Is $\frac{4}{3} \times 6$ smaller or larger than 6? Compute to check.

M2. How many $\frac{1}{3}$-meter pieces fit in 2 meters?

M3. Which is closer to 1: $\frac{7}{8}$ or $\frac{4}{5}$?

X1. Gold: silver beads are 3 : 5. There are 40 beads. Find each count.

X2. Orange: purple tiles are 5 : 3. What fraction of all tiles is orange?

Worked example - compare with the slide model

Orange : purple tiles is 3 : 2. There are 25 tiles. Find each count.

3 + 2 = 5 equal parts.

25 ÷ 5 = 5 tiles per part.

Orange: 3 × 5 = 15. Purple: 2 × 5 = 10.

Result: 15 orange, 10 purple

Ratio tables and comparisons

Challenge, explain and check

20 daily questions include C1 and C2. Use separate paper when helpful.

C1. Gold: silver beads are 3 : 4 in a 42-bead bracelet kit. Add 6 gold beads. Find the original counts and the new gold: silver ratio.

C2. Mix A uses 2 cups concentrate for 3 cups water. Mix B uses 3 cups concentrate for 5 cups water. Compare at 15 cups water, then say which tastes stronger.

Finish the lesson

S. To compare two mixtures fairly, I can make ___ the same.

E. Mix A has 4 cups juice and 3 cups water. Mix B has 6 cups juice and 5 cups water. Which has the larger fraction of juice?
