The meaning of fraction division

Explore and build the idea

20 daily questions include C1 and C2. Use separate paper when helpful.

Lesson focus: I can show how many fractional groups fit in an amount.

R1. Which is closer to 1: $\frac{7}{8}$ or $\frac{4}{5}$?

R2. Red : blue is 3 : 5. How many blue tiles go with 12 red tiles?

R3. 5 markers cost \$3.25. Find dollars per marker.

R4. Find both $4 \div \frac{1}{5}$ and $\frac{1}{5} \div 4$.

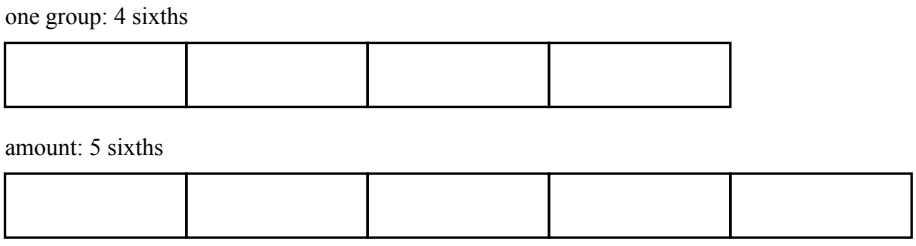

P1. Four meters are cut into $\frac{1}{5}$-meter pieces. How many pieces?

P2. How many $\frac{2}{3}$-cup scoops fit in 4 cups?

P3. How many $\frac{1}{8}$-meter pieces fit in $\frac{3}{4}$ meter?

P4. How many $\frac{2}{3}$-cup groups fit in $\frac{5}{6}$ cup? A fraction of a group is allowed.

Lesson model

The meaning of fraction division

Practice and compare methods

20 daily questions include C1 and C2. Use separate paper when helpful.

P5. What fraction of a $\frac{5}{6}$-cup scoop is filled by $\frac{1}{3}$ cup?

P6. A jar is $\frac{2}{3}$ full after $\frac{3}{5}$ liter is poured in. How many liters fill the whole jar?

P7. Write a story for $\frac{3}{4} \div \frac{1}{2}$. Solve it.

F. Find $\frac{5}{8} \div \frac{1}{4}$. One group is __ eighths. Five eighths holds __ groups.

D. Ben says $\frac{1}{3} \div \frac{5}{6} = \frac{5}{18}$. He multiplies the fractions. Explain what division asks here.

X1. How many $\frac{1}{4}$-sized groups fit in $\frac{7}{8}$? Include a part of a group.

X2. How many $\frac{3}{4}$-cup scoops fit in 5 cups? A partial scoop is allowed.

X3. Share $\frac{3}{7}$ liter equally among 4 bottles. Find each share.

Worked example - compare with the slide model

Find $\frac{3}{4} \div \frac{1}{2}$ with a tape.

Rename one half as two fourths.

Three fourths contains one full pair of fourths and one fourth left.

The remaining fourth is half of a two-fourths group.

Result: $1\frac{1}{2}$

The meaning of fraction division

Challenge, explain and check

20 daily questions include C1 and C2. Use separate paper when helpful.

C1. A $2\frac{1}{2}$-meter ribbon is cut into $\frac{3}{4}$-meter pieces. How many full pieces can you cut? How much ribbon remains? Explain why the quotient is not the full-piece count.

C2. Pitcher A holds $\frac{3}{4}$ liter and fills $\frac{3}{8}$-liter cups. Pitcher B holds 1 liter and fills $\frac{5}{12}$-liter cups. Compare exact cup counts and full cups.

Finish the lesson

S. To divide by a fraction, I ask how many ___-sized groups fit in ___.

E. How much of a $\frac{3}{4}$-meter length is $\frac{2}{5}$ meter? Draw equal parts to show $\frac{2}{5} \div \frac{3}{4}$.
